Bootable USB This page will show you how to create a Bootable USB that will run on a range of computers, tablets and smartphones. . EphB1 receptor tyrosine kinase is critical for immune surveillance of acute lymphoblastic leukemias and non-Hodgkin lymphomas. This study aimed to assess the expression of EphB1 in clinical samples of acute lymphoblastic leukemia (ALL), acute myeloid leukemia, and non-Hodgkin lymphomas (NHL), to investigate the clinical prognostic values of EphB1 in these tumors, and to determine the potential roles of EphB1 in immune surveillance. EphB1 expression in tumor tissue and normal bone marrow (BM) was evaluated by immunohistochemical staining (n = 100) and reverse transcriptase-polymerase chain reaction (n = 130). EphB1 protein was detected in 50% of BM samples of NHL patients and in 17% of ALL patients, but not in acute myeloid leukemia and control BM samples. In the present study, the patients with EphB1 high-expressing ALL displayed a significantly better event-free survival (EFS) (p
