Download "Slave: Ghost" from -2. Run the game and input the code -3. Enjoy!Q: Create Generic Function to get Names of TBase Type's Properties I have a class that has TBaseType properties. If the type was "int" I'd like a function like: TGetProps() And it would return me the name of the "value" properties of int. I know that I could just use reflection, and get the properties off of my type like this: TGetProps(Obj) { Type t = Obj.GetType(); PropertyInfo[] ps = t.GetProperties(); // Do something with ps, like create a list of names... } But I was hoping there was a more elegant way, like: TGetProps() which would allow me to call the function without having to know specifically what my base type is. I know that this isn't possible, but I thought I'd ask just in case there's a method for it. A: You can use the Type class to get the type generic information, like so: private static readonly Dictionary propDict = new Dictionary { { typeof(Decimal), "Value" }, { typeof(SByte), "SByteValue" }, { typeof(Byte), "ByteValue" }, { typeof(Int16), "Int16Value" }, { typeof(UInt16), "UInt16Value" }, { typeof(Int32), "Int32Value" }, { typeof(UInt32), "UInt32Value" }, { typeof(Int64), "Int64Value" },

Overview

Over the past year, the Black Sails crew has had a privileged life. Tricked by a former shipmate into taking a job aboard the Charlotte/Ville Grimoux, of ever-increasing bonuses and more luxury than the best-run merchant vessels. By the middle of the year, a mutiny by the crew and Captain Flint take over the ship. With their capture by the British East India Company, Captain Flint is arrested and imprisoned. The crew is imprisoned too but will not stay behind bars for long, for they all share a love for dueling, swordplay and saltwater. The crew of Black Sails goes on the run around the world, but are pursued by their former crewmates now working for the British Empire. The goal of the crew is to complete their original mission and escape the pursuit of their former crew, with all that came with it.
