AutoLISP Visual LISP, or LISP, allows programming in CAD, GIS, graphics, document conversion and

web programming for AutoCAD. Visual LISP is used to extend AutoCAD or add new features. Programming languages for this purpose include AutoLISP, Assembly and Visual Basic. AutoLISP has the advantage of an object-oriented design, allowing users to create and modify programs through objects. Visual LISP supports the .NET Framework for extensibility, allowing AutoCAD to be designed and developed on a platform such as Windows, Macintosh and Linux. VBA In VBA, many AutoCAD features can be manipulated via the VBA scripting language. For example, AutoCAD can be used to create a variety of reports. These can be stored as a macro-enabled file (.mbx) or as a script (.scr) that can then be included in other.mbx or.scr files. Visual Basic allows for the rapid development of programs, as well as the customization of the AutoCAD environment. AutoLISP and VBA can work in tandem, providing programmers with an efficient development environment and potentially offering AutoCAD users increased productivity. .NET .NET is a Microsoft implementation of the Common Object Model. AutoCAD supports.NET through ObjectARX. ObjectARX is a C++ class library, which was also the base for: products extending AutoCAD functionality to specific fields creating products such as AutoCAD Architecture, AutoCAD Electrical, AutoCAD Civil 3D third-party AutoCAD-based application There are a large number of AutoCAD plugins (add-on applications) available on the application store Autodesk Exchange Apps. AutoCAD's DXF, drawing exchange format, allows importing and exporting drawing information. Support AutoCAD is supported by Autodesk's technical support departments.
