all these technologies are changing the way we use machinery in the future. it's not just for dedicated producers—everybody from students to hobbyists can benefit from the boost the next generation of products will bring. we've already seen this coming in the auto industry, and we're now seeing it with manufacturing and robotics. the next generation of machine tools is more economical and less wasteful. it could also mean a breakthrough in the quality of 3d printer prototypes. we'll find out if the next generation of manufacturing will also give us more beauty as well as more functionality. at first, the research collected the steps for production design of leather goods and the manufacturing process for leather goods and evaluated the created design using the software. afterwards, researchers calculated their areas of focus for the next stage, but they're not restricted to these specific fields. they conducted a survey to find out the frequency of use of specialized leather goods design software and its field of application. they also used interviews to get a feeling for the software and the market for leather goods design. as a result, researchers compared and contrasted those using the software with those without software and gathered the user's feeling on the software. the paper produced five of the six findings from the survey: the software is used by designers and manufacturers in the field of leather goods design and manufacturing. it is also used as a tool to make prototypes and material sample books. software shows its usefulness in terms of reducing time, and it also reduces the chance of design errors. in addition, the researchers found out that the software gives designers a sense of fulfillment. every time the manufacturers ask for a design, the software checks if it satisfies the companies' requirements.

the chinese online fashion market is said to be worth approximately \$75 billion (rmb 518.6 billion), according to alibaba, the world's largest e-commerce company. this is a big chunk of the global sector, and it's growing rapidly. the online shopping boom in china has been driven by the so-called "new retail generation" who prefer to shop online. these consumers mostly shop for non-luxury items and cannot afford the risk associated with a conventional brick-and-mortar stores, especially when it comes to payment. more than 50,000 people have been deleted from the platform, even though their sales are frozen. the move marks a major escalation of china's clampdown against cheating that has sent tens of thousands of businesses into liquidation, and is now threatening to crash foreign-listed chinese stocks. attempts by foreign companies to enter the chinese market have been less successful than expected. sure, there are some successes, such as the chinese unit of primark, or the online shopping destinations operated by us retail giant walmart, but there are others like amazon, which has lost its battle for chinese market share to local rivals. theres a lot of excitement around the alexa fund, which covers a wide range of technology companies. much of the news revolves around the fact that capital one is returning some of its money to the fund, as part of an investment strategy. this is often seen as positive for the fund as it sheds its riskier startups and moves into a more balanced portfolio. amyl, a cloud-based ai-powered webinar platform from getstream, adds simplicity and effective customer service to sales enablement. the platform automates the entire webinar flow from event creation through to viewer conversion. amyl therefore, makes it easy to create and schedule webinars and distribute content, whether using email, online store shopping cart or mobile app, all from a single platform. its fully-branded webinar chatbot makes it easy to engage with viewers and coaches. amyl also provides ongoing customer service to ensure attendees have a pleasant experience. 5ec8ef588b
